

Global M&A Database

Powered by PLS Inc.

Simple & Easy

The Global M&A Database is simple and easy to use, offering seamless downloads and data export capability. The PLS data and analytics reside on a nimble software platform for easy training and individual use.

Thorough Coverage

PLS provides not only solid analysis of the marketplace but also uncanny scouting information and source documents.

Solid Analysis

Deals are analyzed per standard and transparent protocols. Through deal comments and notes, clients easily understand the basis of the analytics and are also provided the base data to perform independent valuation.

Personal Reports

System includes a series of standard reports and charts. Clients can create and save their own reports and charts to track what is important to them. Their personal reports are updated dynamically when a new deal fits the criteria.

Transaction Backup

PLS prides itself on transparency of the data and analysis. Included with every deal is supporting documentation and analyst notes as necessary to audit the valuation data.

Timeliness

Deals are updated as close to real time as possible. Often, the PLS analysis will be the first to hit the marketplace.

Depth & Breadth

PLS leverages additional A&D reports, databases, multiple listing service and overall deal flow in support of the industry's leading M&A Database.

Global M&A Database

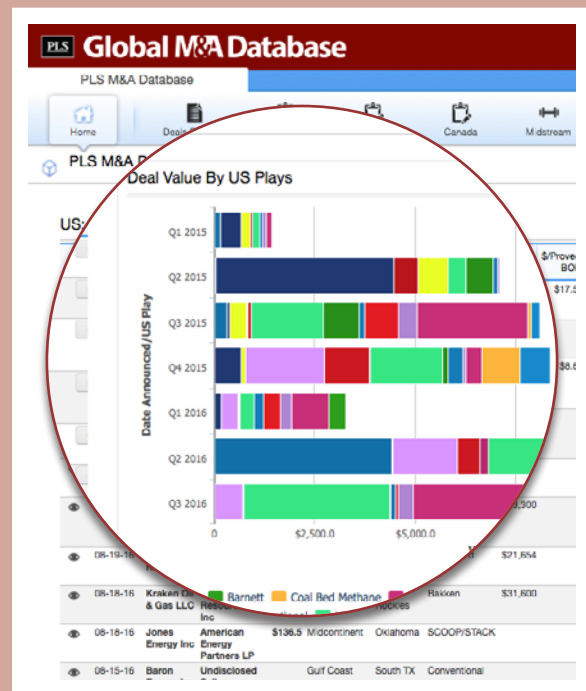

Powered by PLS Inc.

Comprehensive deal coverage.

The Global M&A Database covers the upstream, oilfield service, midstream, downstream, power and utilities and LNG sectors on a user-friendly web-based platform. The coverage captures all deals and includes proprietary valuation protocols, clarity and transparency via attached source documentation, easy export capability and friendly custom charting and sorting.

Uncanny Insight, Unquestionable Analysis

The Global M&A Database is powered by a team of professional and experienced analysts and supported by over 20 years of boutique archived industry research by PLS. The product tracks over 200 data points and thrives on capturing and analyzing all deals. The experience and relationships of PLS drives insight and data not available on other competitive products.

Upstream, Midstream, Downstream, OFS, Power, LNG and What's for Sale.

What's For Sale

Within the Global M&A Database is a natural extension of the PLS multiple listing database. PLS aggregates all publicly announced deals for sale into a single module and is the most comprehensive data set of its kind. This special feature includes every deal ranging from large packages being brokered through agents and investment banks to smaller non-brokered opportunities obtained via PLS scouting.

Powerful Mapping Interface

Currently, the United States module is supported by a mapping interface. PLS is developing additional tools to expand this interface allowing clients to click and outline areas of interest. The AOI will be exportable as well as the transaction data within the AOI. PLS is also working on expanding these capabilities beyond the United States.
